

Zebra Mobile Devices for the U.S. Department of Defense (DoD)

The Broadest Portfolio of STIG Validated Rugged Devices on the DoD Information Network (DoDIN) Approved Products List (APL)

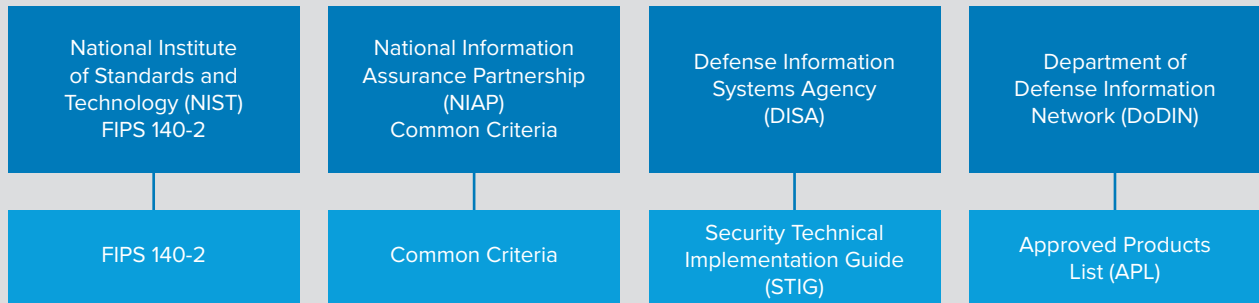

Zebra Offers Largest Portfolio of STIG Validated Rugged Devices

Following a rigorous, process of cybersecurity testing for our Android™ 10 and 11 mobile devices, Zebra has now earned the coveted STIG (Security Technical Implementation Guide) cybersecurity validation from the Defense Information Systems Agency (DISA), the agency responsible for setting cybersecurity standards for the DoD. Zebra now offers the largest portfolio of enterprise-grade mobile devices approved for use on DoD networks.

STIG validation represents a major milestone for Zebra because it means that every device in the enterprise-grade Android 10 and 11 portfolio is now included on the DoDIN APL. Now, all branches of the U.S. military as well as federal, state and local and government agencies can partner with Zebra with the confidence of knowing that our devices meet the most rigid standards for cybersecurity set by the U.S. DoD. (For a complete portfolio list, see pages 4 and 5.)

Zebra engaged in a rigorous security review process that covered both devices and software to achieve FIPS 140-2 validation, Common Criteria Certification, STIG validation and listings on the DoDIN APL.

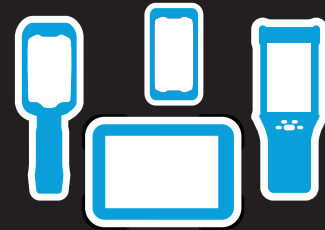

Taking Cybersecurity to New Levels

Cybersecurity continues to be a top priority for all public and private institutions. At Zebra, we understand that cybersecurity is vital to our nation's military, federal, state and local agencies. Our rugged mobile devices empower frontline workers everywhere with round-the-clock access to critical networks, assets and people, while helping organizations enhance endpoint security and contain costs.

As a leader in the revolution of workforce mobility, Zebra is also an innovator in Android enterprise mobility, with the largest range of enterprise-optimized Android devices available on the DoDIN APL today. Zebra solutions are purpose built to improve the productivity and mobility of government agencies.

Fortifying the Android™ Platform for Today's Enterprise

Zebra's best-in-class mobile technology solutions are designed for organizations in the public and private sector to help them meet their specific objectives. Zebra Android devices are the only devices that feature powerful Mobility DNA solutions and Mobility Extensions (Mx) technology that delivers compelling security and management capabilities. Mobility DNA works at the cellular level of Zebra mobile devices to transform the Android operating system into an enterprise-ready force that heightens productivity, simplifies management and eases integration. Built-in Mx technology provides an extra layer of features for robust security and manageability that are not available on mobile devices that run standard Android.

Zebra Devices Operate Up to Your Standards

Zebra now offers the largest number of rugged, enterprise-grade mobile devices on the Department of Defense Approved Products List, making it easy for you to select the right device for your operations.

Zebra Mobility DNA solutions and Mobility Extensions (Mx) technology fortify the Android operating system for government entities by providing additional security as well as increased application and mobile device management.

Mx Security

DEVICE LOCKDOWN WITH ENTERPRISE HOME SCREEN

- Automatically launches and locks user into application
- Prevents access to social networks and gaming
- Provides instant access to most used applications

PERIPHERAL & FEATURE LOCKDOWN

- Restricts user access to peripheral interfaces: USB, Bluetooth, GPS and NFC

GOVERNMENT GRADE GRANULAR DATA ENCRYPTION

- Protects corporate information, payment card and personal data
- Encrypts select data with AES 256
- Generates and secures encryption keys directly on the device

Mx Mobile Application Management (MAM)

APPLOCK

- Application lockdown and white listing

SILENT INSTALL

- Initiates forced device reboot
- Instantly activates updated software

Mx Mobile Device Management (MDM)

DEVICE SHARING

- Log-on ties settings, applications and data access to user ID and password

MDM COMPATIBILITY

- Enables IT to remotely stage, update, troubleshoot, lock, wipe and monitor devices
